

Dear candidate,

Welcome to the testing interview at One Inside.

Below is your task. When finished, put them on github and send a link to: Natasha natasha.anastasova@one-inside.com

Good Luck!

Screens

Description

We need an app where the user can view his profile card and edit it.
Use the wireframes as guidance on the layout of the elements.

- On top right there is an icon for rotation, this means that on interaction with that icon (click) the profile card should rotate to the edit more.
- Data should not be saved on server.
- Frameworks and libraries are free of choice
- Design is free of choice, we expect it to be pretty and simple 😊

Bonus: Save the data locally (local storage)

Key elements

- Sizing:
 - Width and height of the elements are by choice
- Font:
 - <https://fonts.google.com/specimen/Eczar?selection.family=Eczar>
